AI Unleashed: Transforming ITAD into a Strategic Powerhouse

In this session, we'll Step into the future of IT Asset Disposition where AI isn't just a buzzword – it's a game-changer. This session will showcase how AI redefines ITAD with:

- 1. Advanced Data Erasure:** Implement AI-driven protocols for comprehensive data security – ensuring no data is left vulnerable.
- 2. Predictive Asset Management:** Leverage AI for predictive analytics – enhancing maintenance and extending asset life.
- 3. Increased Cost Efficiency:** Use AI to streamline processes, reduce costs, and optimize resource allocation.
- 4. Ensured Compliance:** Automate compliance monitoring with AI – outpacing regulatory changes with minimal effort.
- 5. Optimized Asset Valuation:** Accurately assess and maximize asset recovery value with AI

Our Story:
After serving in the war effort w/Panasonic Toughbook's from 2001 to 2011

In 2011 PlanITROI became a Social Enterprise.

Definition of a Social Enterprise:
"Make Money to do Good"

In 2024 PlanITROI became a wholly owned subsidiary of NEXTRA TECH The ITAD industries first collective of independent ITAD companies

PlanITROI: Bridging the Digital Divide
Since 2001, PlanITROI has been at the forefront of closing the digital divide by repurposing affordable technology from our clients' retired IT assets. Our commitment to 100% data security ensures that organizations achieve their critical Environmental, Social Governance (ESG) and Corporate Social Responsibility (CSR) goals while maximizing the value of their assets.

Our Journey: Pioneering Excellence
Early Days: We began by addressing the complex data security requirements of the Department of Defense and Panasonic Toughbooks. Our unwavering focus on safeguarding sensitive information set us apart.

ESG Leadership: In 2011, we took a bold step into the ESG landscape. By integrating sustainability practices, we not only benefited our clients but also contributed to a greener planet.

Retail Recovery: Recognizing the evolving needs of the industry, we swiftly transitioned into retail asset recovery. Our expertise in refurbishing and reselling IT assets became a game-changer.

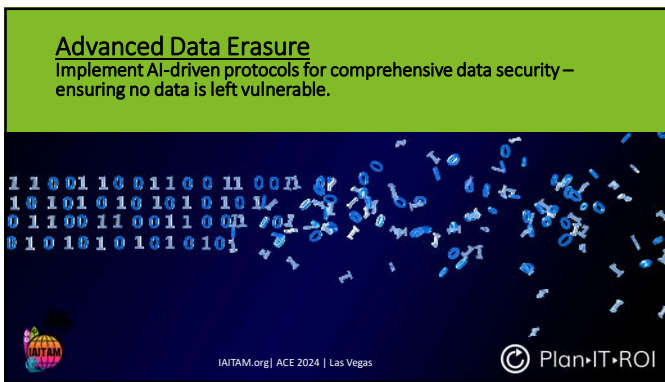

AI Innovation: Today, we lead the way by harnessing the power of artificial intelligence (AI). Our cutting-edge solutions optimize asset recovery, reduce waste, and drive sustainable practices.

Join us in bridging the digital gap while making a positive impact on the environment and society. 🌱

5

Maximizing Value and Security... it's never or!

Shredding and data wiping every sector will never be the most valuable option, so how can we use AI to deliver unprecedented data security and the highest return?

- Pinpoint Accuracy
- Automation
- Adaptability
- Will focus on destruction of sensitive data

6

Predictive Asset Management: Leverage AI for predictive analytics – enhancing maintenance and extending asset life.

"Dumb" Asset Tags → "Smart" Asset, no tag needed

With an increasing influx of IT assets, maintaining an accurate inventory, predicting asset degradation, and ensuring optimal utilization have become indispensable.

AI facilitates:

- Automated Asset Tracking
- Predictive Maintenance
- Valuation and Redeployment

8

Automated Asset Tracking

Leveraging AI algorithms and IoT devices to automatically track and manage assets, reducing human error and enhancing accuracy

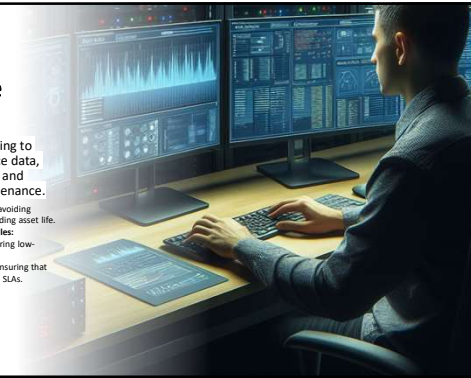

- **Tagging:** As new inventory arrives, each item is tagged with a smart label.
- **Monitoring:** Sensors read the tags and send real-time data to the AI system.
- **Data Analysis:** The AI algorithms process the data to track the location and status of each item.
- **Optimization:** The system identifies the most efficient storage positions based on retrieval patterns.
- **Alerts:** The AI system sends alerts if items are placed in the wrong location or if stock levels are low.

9

Predictive Maintenance

Employing machine learning to analyze asset performance data, predict potential failures, and recommend timely maintenance.

- **Reduced Operational Costs:** By avoiding unplanned downtime and extending asset life.
- **Optimized Maintenance Schedules:** Maintenance can be planned during low-impact periods.
- **Improved Service Availability:** Ensuring that IT services are reliable and meet SLAs.

10

Valuation and Redeployment

Utilizing AI to analyze the condition and residual value of assets and advising on redeployment, resale, or recycling.

Data Collection and Integration:

- Gather data from various sources.
- Integrate these data sources into a centralized platform.

Condition Assessment:

- Utilize machine learning models to evaluate asset health based on sensor data and historical performance.
- Factors considered:

Valuation:

- Estimate the residual value of each asset.
- Classify assets into categories.

Recommendations:

- **Redeployment:** Identify assets that can be repurposed within the organization.
- **Resale:** List assets with market value.
- **Recycling:** Assets beyond repair or with no market value.

Decision Support:

- **Asset Health Overview:** Visualize asset conditions.
- **Financial Impact:** Display potential gains from redeployment or resale.
- **Environmental Impact:** Highlight recycling benefits.

11

Increased Cost Efficiency:
Use AI to streamline processes, reduce costs, and optimize resource allocation.

12

Increased Cost Efficiency: Operational Measures Driving Cost Savings

PlanITAi® ROE PlanITAi® Tunnel PlanITAi® Sort PlanITAi® Pack

13

PlanITAi® ROE

Predictive Asset Arrival and Resource Allocation

- Driving efficient resource allocation
- Machine learning model utilizes historical data to predict asset types

Predictive Intelligence for Asset Condition Assessment (Audit)

- Remove the “human” element of error prone processing

Historical Data Modeling

- “Learning” from recurring model specific issues
- Anomaly Detection – “what usually goes wrong” with model “X”

AI Driven Decision Support

- Refurbish, Recycle or Resell?
- Multi-variable decision making (condition, market, historical data)

14

PlanITAi® Tunnel

Smart Receiving Process with Imaging and Generative AI

- Efficiently evaluating incoming assets while maintaining accuracy
- AI Analyzes real time images for cosmetic issues, detect missing components, assess overall condition

Serial Number Resolution in Real Time

- Tracking asset information across various positions and orientations
- Computer vision can recognize serial numbers regardless of position

Active Ordering Process

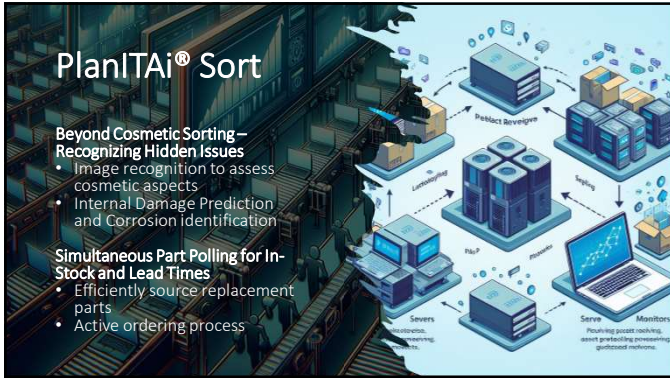

- Cosmetic issues are parts matched in real time
- Refurbishment and repair needs are flagged

Smart Receiving
Imaging utilized on goods without human intervention

Serial Number Resolution
Recognizing serial numbers in real time regardless of position

Active Ordering Process
Identify cosmetic issues and flag for repair or replacement

15

17

18

Increased Cost Efficiency... PlanITAI® is the future of ITAD

PlanITAI® ROE

Machine learning used to predict what is coming in and what resources are required to process the material.

- Predictive intelligence of sites – knowing what “usually” goes wrong and getting smarter with each receipt

PlanITAI® Tunnel

Smart receiving process utilizes imaging and generative AI to evaluate units.

- Serial number resolution in real time regardless of position
- Active ordering process to find cosmetic issues and match parts

PlanITAI® Sort

Going beyond model and cosmetic sorting.

- Leveraging the predictive receiving process to guide the analysis
- Cosmetic issues are recognized and parts are simultaneously pulled for in-stock and lead times

PlanITAI® Pack

Packing on-demand model – in real time.

- Creating boxes for what you need now – not what you might need
- Decreasing material consumption

Key Outcomes:

- 34% Decrease in receiving errors¹
- 67% Decrease in receiving labor²
- 20% decrease on time to consumer³
- 50% Decrease in packaging costs⁴

19

Ensured Compliance:

Automate compliance monitoring with AI – outpacing regulatory changes with minimal effort.

IAITAM.org | ACE 2024 | Las Vegas

20

Generative AI Compliance Monitoring using PlanITAI®

Save time with internal processes

PlanITAI® accelerates workflows by relying on generative AI as an efficient research tool.

Increase productivity

With PlanITAI® we can conquer the most complex compliance questions faster than ever.

Improve communication

We can answer the toughest ITAD compliance questions in real time with PlanITAI® by providing timely and accurate insights – enhancing the way we deliver information and decision making.

Stay vigilant of risks

We have the ability to detect critical risks and resolve questions using our powerful PlanITAI® research tools – all created within seconds.

IAITAM.org | ACE 2024 | Las Vegas

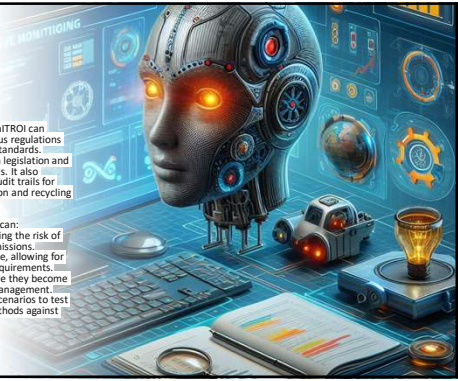

21

Enhancing Regulatory Compliance & Data Security in ITAD

With the implementation of PlanITAI®, PlanITROI can monitor and ensure compliance with various regulations such as GDPR, HIPAA, and environmental standards. PlanITAI® continuously scans for changes in legislation and automatically updates compliance protocols. It also generates and maintains comprehensive audit trails for each asset, ensuring that all data destruction and recycling processes meet the required standards.

- By leveraging Generative AI, the PlanITROI can:
- Automate regulatory reporting, reducing the risk of human error and ensuring timely submissions.
 - Track changes in legislation in real-time, allowing for swift adaptation to new compliance requirements.
 - Flag potential compliance issues before they become problematic, enabling proactive risk management.
 - Enhance data security by generating scenarios to test the robustness of data destruction methods against emerging threats.

22

Optimized Asset Valuation: Accurately assess and maximize asset recovery value with AI

What is your ITAD Company doing? How are your assets being handled?

99% of ITADs & Recyclers Sales

PlanITROI a key supplier for 10+ Years

Rule-based dynamic pricing

- Specific rules based on specific pricing
- if/then "simplistic" systems
- Lack of Adaptability
- Outdated rules

AI-driven dynamic pricing

- Leverages machine learning and data analytics to optimize prices
- Dynamically
- Adapts to changing conditions
- Adaptable and Agile

PlanITAI® drives dynamic pricing models through PlanITvision

IAITAM.org | ACE 2024 | Las Vegas

25

AI-Powered Engines Embrace the Full Complexity of Retail Pricing

The dimensions of an **AI-powered approach** to pricing fall into three categories:

- Strategic
- Hygienic, and
- Dynamic

AI-powered solutions can iterate through billions of potential scenarios to find the optimal price for each store and item, considering all of these dimensions at once.

Holistic optimization across all dimensions

Source: BCG analysis
Note: KVI = key value items

IAITAM.org | ACE 2024 | Las Vegas

26

AI-Powered Dynamic Pricing

Online reinforcement learning based dynamic pricing

PlanITAI® has advanced PlanITROI from a rule based pricing system to a dynamic pricing model:

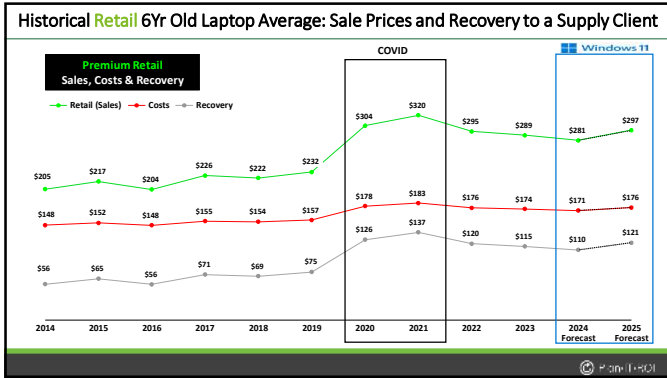

- PlanITAI® analyzes real-time data on customer behavior, competitor pricing, inventory levels & market trends
- PlanITAI® adjusts prices dynamically to optimize revenue and profit margins

Other Benefits:

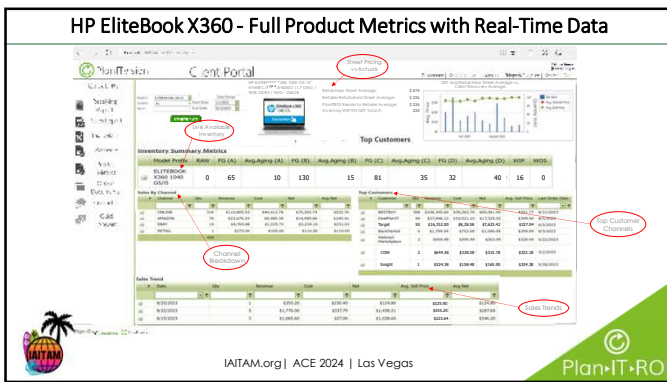

- PlanITAI® can create personalized price offerings and discounts to "likely" customers
- PlanITAI® can even sense when a consumer is willing to pay more
