# IT Financial Optimization Framework

## FinOps

FinOps practices enables organizations to achieve financial control and optimization in their cloud environments. It helps them understand the costs associated with running workloads in the cloud, optimize resource usage, allocate costs accurately, and make data-driven decisions to maximize the return on investment (ROI) from their cloud investments.

## ITAM

IT Asset Management enables organizations to optimize IT asset usage, control costs, ensure compliance, mitigate risks, enhance security, and make informed decisions about technology investments, ultimately contributing to improved operational efficiency and better alignment between IT and business goals.

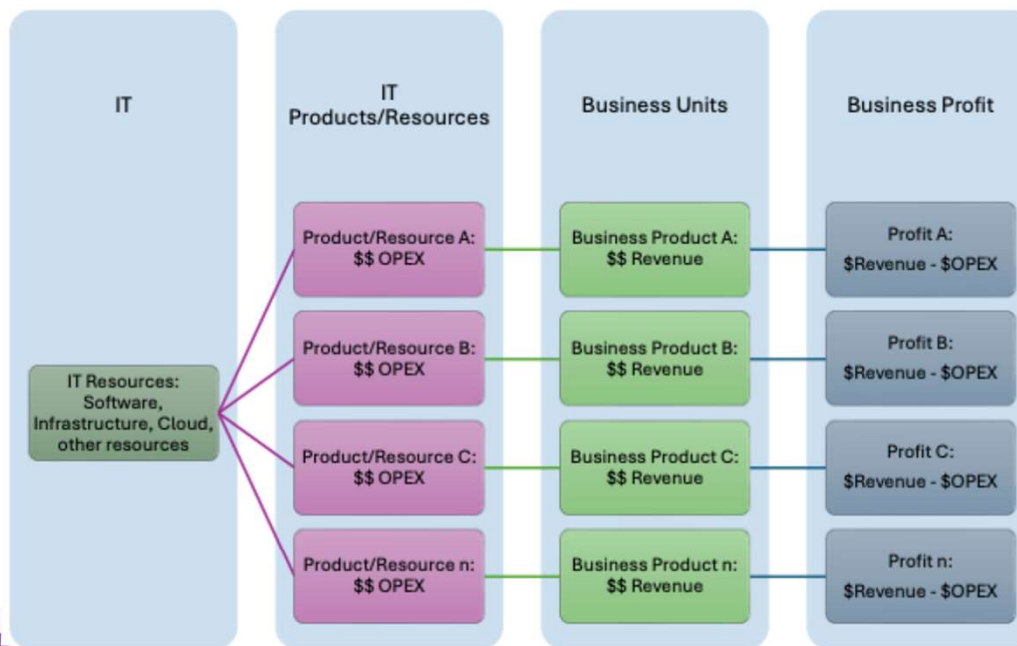

## T2B

Technology To Business (T2B) model emphasizes the direct correlation between technology initiatives and their impact on business outcomes. T2B establishes a clear link between IT investments and the value they bring to the organization, fostering a holistic understanding of technology's role in achieving business objectives.

# IT Products Catalog & Dependencies

An IT Product Catalog serves as a strategic framework for managing and optimizing IT investments. It provides a structured view of all digital and shared products, enabling organizations to make informed financial decisions, improve cost efficiency, and align IT expenditures with business objectives.

| IT Product | Type            | Category | Business Unit | Description    |
|------------|-----------------|----------|---------------|----------------|
| DP1        | Digital Product | Web      | BU1           | E-Commerce     |
| DP2        | Digital Product | Portal   | BU2           | Payment Portal |
| DP3        | Digital Product | App      | BU1           | E-Wallet       |
| SP1        | Shared Product  | Platform | BU3           | CRM            |
| SP2        | Shared Product  | Platform | BU3           | ERP            |

## T2B – Dashboard Examples

April 22-24, 2025 | The M Resort Spa Casino | Las Vegas, NV

## Summary

- A well-implemented **IT resource tagging strategy** enables ITAM, FinOps, and Business to communicate effectively, breaking silos and ensuring that technology investments drive measurable business value.
- An **IT Product Catalog** structures IT offerings into well-defined services, linking them to financial and operational data. Understanding dependencies between Digital Products, Shared Products, cloud resources, software licenses, and infrastructure components ensures better budgeting, chargeback models, and resource optimization.
- By integrating tagging with a T2B approach, organizations can establish a **T2B Value Chain**, where IT spending is directly tied to business impact. This alignment fosters data-driven decision-making, enhances cross-functional collaboration, and optimizes IT financial management for long-term success.

## Quiz Time!

1. What is a digital product and what are its main differences compared to a Shared Product?
2. What are the types of dependencies for IT products, and what are their differences?
3. What is the model that allows us to link IT resources with the business and measure their profitability?
4. What practices help us generate and manage proper tagging of IT resources?
